

“The *FastFlex* Program”

Smart materials managers are lowering costs and increasing profits associated with obsolete and excess Inventory with Freelance Electronics’ innovative *FastFlex* Program. The program is built around your desire to maximize both the speed at which excess inventory is moved out and the number of options you have at your disposal for this purpose. **Fast AND Flexible.**

How the *FastFlex* Program works:

Freelance develops a strategy with you for your excess or obsolete inventory. The goal of the program is to offer speed, flexibility, certainty and increased profitability to the process. As inventory is identified as unwanted or obsolete, you make one call to one vendor and all your excess inventory worries are over. Handling costs go down and overall revenue from obsolete inventory goes up.

We build a strategy around your needs that includes some or all of the following. We can:

Conduct an onsite inventory of your obsolete material, including an appraisal of both the value of the material and the expected timeframe to final disposition. This is done at no cost to you.

We will Inventory your materials at our bonded, secure warehouse when a list is not available or come to your location at no charge to you.

Sell your excess inventory on Consignment or send us your inventory for an estimate, if you are not satisfied we will **send the product back to you and we pay the shipping**

Return any unsold or needed inventory at any time at our expense.

Recycle your E-waste, Precious Metals, Computers, anywhere with our **Nationwide Partners**

Destroy your proprietary excess material with video proof of destruction.

We handle your obsolete inventory through the complete cycle.

You’ve heard the unrealistic promises. You’ve sold inventory to inexperienced vendors. Isn’t it time for a more realistic, complete strategy that is customized to meet your needs? We’ve been buying and selling obsolete military spec and electronic material since 1986 for some of the biggest names in the Defense and Technology Industries.

Isn’t it time you talked to Freelance Electronics? “Free Appraisal and Market Analyses”
